

Quality Water of East Texas

# Reverse Osmosis System

Home drinking water system that provides exceptional quality water at your kitchen sink.

## Benefits

- Undersink RO removes a wide variety of contaminants in water including disinfectants like chlorine and chloramine, metals like lead, iron, arsenic, copper, organics, inorganics and even viruses and bacteria.
- RO has its own faucet and forms a closed system where outside contaminants cannot infiltrate and harm the water quality.
- Convenience of having an unlimited supply of bottled water quality fresh water at home without having to go to the supermarket.

## Technical Details

- Works with 2 Carbon Filters & 1 Sediment Filter
- The system needs to stay within 41-80 psi. If water pressure exceeds 80 psi, a pressure regulator will need to be added.
- All our R/O units use John Guest fittings
- The membrane produces 75 gallons of water per day.
